TECHNICAL DETAILS

SIZE	390 x 270 x 470 mm
WEIGHT	21,5 kg
BUILDING VOLUME	120 X 190 X 200 mm
XY RESOLUTION	± 75 µm
Z RESOLUTION	± 10 µm
TOLERANCE	< 30 µm
SLICER	Pyramis
PRINTING SPEED	8mm/h (it depends on resin profile)
WAVELENGTH	405 nM

G-MODEL

S-WAX ● Color: Light Blue

Castable resin with a truly high paraffin wax content! The Sharebot burnable resin for 3D printing is light blue and it is perfect for jewelry and for all the industries where melting and pouring are needed. With a content of wax larger than 30% and zero carbon residue, S-Wax allows to obtain clear and detailed fusions.

Thanks to this property, S-Wax is also great for realizing series productions through 3D printing and without having to produce an expensive traditional mold for casting.

N.B.: Data could change for technical needs.
