

AIM3D 3D printing technology provides a wide range of material options, including various grades of stainless steel, aluminum, titanium, and Inconel. These materials are used to create high-precision, complex parts for industrial applications.

304L Stainless Steel Powder

- 1. High precision and accuracy
- 2. Complex geometries and internal features
- 3. Wide range of material options
- 4. Small batch production and prototyping

AIM3D 3D printing technology provides a wide range of material options, including various grades of stainless steel, aluminum, titanium, and Inconel.
